# CHT Overview

Utility token – Community Hedge token (\$CHT) is a Community-owned utility token, dedicated to bringing greater efficiency, safety and market expansion to the space. The BSC token space has become corrupted with quick cash grabs, honey pots and lousy developers not bringing real value to the space.

**We're here to change that.**

# Pairing (CHT/BUSD)

\$CHT has been paired with Binance US Dollar (BUSD). According to Binance, BUSD is one of the few stable coins within cryptocurrency that has a 1/1 backing in the actual cash equivalent, held and managed by Paxos. BUSD also provides monthly audited reports of its reserves. \$CHT has been paired with BUSD to emphasise the strength, stability and security of \$CHT.

Due to being paired with the US dollars value we are not subject to market volatility unlike any other tokens paired with BNB/ETH. Other tokens paired with BNB will be negatively impacted when the price of the underlying asset falls, thus impacting the chart in an unfavourable manner.

When the market is in a cycle of growth \$CHT will also benefit from expansion through a greater audience, whilst protecting investors from a potential correction. \$CHT has been built to thrive in all market conditions.

# Tokenomics

## Total Liquidity Pool Burn

\$CHT's initial liquidity provided at launch has been 100% burnt meaning \$CHT will forever be tradeable and is 'unruggable'. Most tokens choose to lock their liquidity for a set time period and extend or remove based on the success of their project. This indicates to investors the developers do not believe in their project as they are uncertain of the outcome. \$CHT is a long-term project dedicated to giving real intrinsic value to its holders and the BSC space. The 100% liquidity pool burn is just a reflection of our core beliefs.

Give value, don't take value.

# Tokenomics

## Community Surplus

Community surplus of 2% is taxed on all transactions. This is used to build and grow the community during the initial phases of launch. Once we are large enough, this fund will stay present, and the community will be able to vote on our platform to choose how they would like to allocate the funds.

# Tokenomics

## Buy Back and Burn

This is a 2% tax applied to all transactions. This fund is used to buy available supply thus supporting the chart and ensuring good levels of volume throughout. By reducing the supply of the token through buy backs, we create greater stability and a rising price floor for investors.

# Tokenomics

## Automatic Liquidity Pool injections (Auto LP)

This 2% tax is automatically injected into the liquidity pool. This reduces volatility and creates a rising price floor of \$CHT. Auto LP will also make our token more attractive to larger investors (whales) as a growing liquidity pool facilitates greater buys without extreme volatility.

# Tokenomics

## Max wallet

\$CHT has a 1% maximum wallet size, this protects investors from one individual holding too much of the token supply. This subsequently leads to a more trusting environment for new investors, as it gives equal opportunity and levels the playing field.

# The current microcap space

Currently the Binance smart chain (BSC) space is incredibly unorganised and inefficient. Imagine you're a new investor, where do you start? You'll use Coin Sniper to find new projects, Pancakeswap to buy new projects and then telegram to stay updated with projects. Now how is a new member to the market supposed to figure out how to navigate all these platforms? A 30 minute You tube tutorial? With the average attention span falling at a rapid rate, researchers estimate you have 8 seconds to capture someone's attention, thus rendering the current system ineffective, outdated and uninviting.

The microcap space currently has seen a great expansion in services provided, more developers, tokens and services provided without a larger market to operate within. Due to the sequence of growth between service provider/investor the market has become saturated, resulting in an exchange of funds between the same group.

The vast majority of the microcap space runs off private groups (who you know) as supposed to real due diligence. For newcomers to the market this heavily disadvantages them, with the only vantage point being luck.... Making it almost the decentralised online casino.

**The space needs to change.**

# Our Utility Platform

CH Swap incorporates all the main areas of the market into one 'T.T.C.C' Trade, Track, Chat, Check. Through our platform you will be able to find the latest safe tokens, trade and stay updated with them. All tokens being added to our site will have to complete and pass vigorous checks ensuring they're safe. Not only does this simplify the space it will bring a new element of trust, transparency and efficiency. This will also aid onboarding new individuals to the space fixing the sequence between service providers/developers and investors.

Having the whole space on one platform will enable us to conduct more effective marketing through search engine optimization, social media adverts, billboards and mainstream trending. CH Swap will also be available on Google play and App store soon after launch.

We will have a more detailed breakdown of the functions of the utility, alongside influential youtubers creating tutorials on how to use closer to the date of complete launch.

# Revenue

A 0.5% fee will be applied to CH swap which will be used to buy back and burn \$CHT.

CH swap will also generate revenue from advertisements/promotions on the platform. A percentage of this money will be equally distributed amongst \$CHT holders giving a real yield to holding \$CHT. The remaining revenue will be used to progress and advance the platform.

A common theme throughout the (BSC) Space is bring it back to its old days, however, we are dedicated to bringing BSC out of the old and into the future, a fresh era of expansion.

# Roadmap

- Organic growth, new commers to space
- Small scale promotions
- Word of mouth
- Initial Social media push
- Shill group
- Small promotions
- Target influencer
- Publicity stunts
- Banners/trending/upvotes

- AMAs
- Podcast discussions
- Informative growth
- White paper release
- Swap release
- Large promotions TG/Twitter
- New tokens deployed on our swap
- CMC/CG

# Roadmap

- Full utility released
- CEX's
- Billboards
- Greater promotions
- Celebrity reviews

- Platforms app developed
- Deployment of google play and IOS app
- Trending on CMC/CG/CEX's
- Trending on the Appstore
- Continuous rolling marketing
- New partnerships
